Spriggen Gardener

PRIVATE LIMITED

Vertical Gardens or Green Walls are a system of growing plants on vertically suspended panels. A remarkable innovation, they seem to fill up large area without occupying much real estate.

Vertical Gardens are smart real estate investments. 10 sq feet of valuable space creates 100 sq feet of greenery. Indoors or Outdoors!

Green walls give you greenery or a splash of color and can be artistic or abstract with the inclusion of other materials such as wood, metal, flowing water, or other elements.

Indoors they help in purifying the air and decrease the temperature in closed spaces. In offices, they are a soothing influence and create better working spaces.

"But the glory of the garden lies
in more than meets the eye."
